Rec. Dec 14
to Febr 25th

SMITHSONIAN INSTITUTION,
Washington, November 20, 1852.

The Smithsonian Institution is engaged in a series of investigations relative to the Meteorology of North America, and is desirous of collecting all information bearing on this subject.

It is believed that there exist many records of observations extending back, in some cases, through a long period of years, the comparison and discussion of which would elicit much valuable information relative to the climate of this country, which would otherwise be liable to be lost. The undersigned would therefore earnestly request that copies of such journals, or the original records, be lent or presented to the Institution. In cases of records which cannot be sent to the Institution, monthly or other mean results deduced from them are requested, with explanations of the manner in which the observations were made, the character of the instruments, &c.

Proper acknowledgments of all information derived from the records will, in every instance, be given, and the registers themselves will be carefully preserved, and returned, if desired, to those from whom they were obtained.

When it is recollected that isolated observations are greatly enhanced in value, and made to yield new results by comparison with other observations, it is hoped that the request of the Institution will meet with favorable regard.

Joseph Henry,
Secretary.

Rec March 18[th]

Smithsonian Institution March 9. 1853

Dr Ge. Engelmann

My Dear Sir

Your note of Feb[y] 25[th] is received. You kind offer to send the volumes of Meteorological Observations made by you for temporary use places us under obligations but it may be possible to attain our purpose without the transmission of the original observations if, as you intimate, Abstracts of them actually have been made in a compressed form by yourself An abstract giving the means and Extremes of each observed condition Monthly would answer all the purposes contemplated by the Circular - The sum of precipitation being added - The discussion of the Constant quantities of our Climate is the only purpose to which observations intended to 1858 can be applied.

Since that time observations comparable
in time & manner of obsevation with those of this institution
assist the discussion of Storms & changes.

Copies of the form now in use sent for
your Examinations, & use if you Resire.

We would be glad to receive a particular
notice of the Amount of precipitation in Rain
and Snow at St Louis, and at other points
in the vicinity if you have notes of other obs-
-ervations.

Any packages may be sent by Express
at the charge of this Institution if impossible
to send Abstracts, or if the abstracts are too
bulky for the mail.

If original observations are sent or if the ab-
-stracts are desired to be returned it will be done
at such time as you may desire.

Very respectfully
Your obedient Servt
Joseph Henry

Dear Sir

We have received a letter from our agent in Leipsic informing us that the bookseller in that city of whom you ordered botanical books, has presented his bill to your brother in Frankfurt but has heard nothing in reply. What shall I say to him in regard to the matter?

When I last had the pleasure of seeing you, we had some conversation on the subject of publishing in full your meteorological observations. Are you still inclined to give them to the public through this Institution, and if so when will they be ready for the press? We will furnish you as many copies for distribution among your friends as you may require. We are now printing a series of observations made by Prof Caswell of Brown University.

Very Respectfully
Your Obedt. Servt.
Joseph Henry

R.C Sept 28th 1859
Ans. Aug 28 1860

Charles Catlin

Smithsonian Institution
Washington D.C. Sept 26th 1859.

Dear Sir,

Your letter of the 15th Inst. has just been received, and I write to say that we shall give our agent Dr. Kliegl the proper information in regard to your connection with the books for Mr Shaw.

The Dellman apparatus has just arrived; and however expert the inventor may be in the use of instruments, I am very sorry to say he has but little knowledge of the important art of packing. The essential part of the apparatus viz, the electrometers, came to hand broken. We shall endeavor to supply the missing parts for Dr. Wizlizenus and will forward the whole as soon as we can attend to the business.

As to your meteorological records I think it important that the whole should be published, but I do not think it necessary that the manuscripts should be copied, since the original may be returned to you from the printer. In place of copy

ing I would advise that the whole be placed in the hands of Mr Tendles for preparation for the press, and for making such deductions from the records as his knowledge of the subject & talents will enable him to do. The Institution will make a small appropriation to pay the expense and it is desirable that the work should be done as soon as possible.

I will confer with Prof Baird when he returns, as to what we can do in the way of procuring copies of publications for you.

Very respectfully

Your obed't. serv't.

Joseph Henry

Secretary.

My Dear Dr

I presume you are begining to be impatient to receive your Athmospheric apparatus and I write to inform you that I have devoted all my leisure time for many a week past to its study and to the instruction of our workmen in repairing the broken parts

We shall have no difficulty with any part but the glass filaments which came in small fragments. I have sent to New York to have a quantity drawn by the glass blowers but have not yet learned whether they can be made by ordinary workmen & this class. If they cannot be procured in this way we shall attempt to acquire the art of spinning the glass and shall forward your instrument as soon as

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

It is in a proper condition to leave our hands.

We shall have some parts refitted and put in better working order than they were at first.

I find the instrument prepared for the institution furnished with a small galvanic battery for determining the absolute intensity of the electrical excitation as compared with the unit of a single element of a Zinc & copper battery charged with rain water. The arrangement of the apparatus to facilitate the use and to give precision to the results are very ingenious.

I have heard nothing from you in reply to my proposition that you should employ the Funds to prepare for the press your series of meteorological observations. Let me know what you think of this

proposition and if you approve it
how long before the material will
be ready for the printer.

I remain very respectfully
Your obt. servt.
Joseph Henry

Smithsonian Institution
Washington D.C. Oct 26th 1860

Dear Sir,

Your letter of Aug 28th would have been answered before this, had I not been absent from the city.

I am sorry to learn that your meteorological observations are not in as good a condition as you could wish, but notwithstanding your desponding account, I still think they are of some value. They extend, if I rightly recollect, over a period of more than 25 years, and although the instruments in some cases have been defective, yet they would serve to furnish the comparative temperature at different periods; the recurrence of remarkable periods of heat and cold, of storms of wind and rain, and of changes in barometrical pressure. I suggested that you place them in the hands of Mr Fendler, who appears to be much

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

interested in matters of this kind, and that the Institution would make a small appropriation to defray the expense of the reductions. If there should be any cause why you should not wish to put the material in the hands of Mr. Flendler, or he should not desire the work, if you will send the records to the Institution, we will have them prepared for publication in Washington, if on careful examination we find them worthy of the expense.

It would be a matter of regret, that the labor you have bestowed on these observations should not be made to bear proper fruit in the way of advancing science.

I am pleased to learn that Dellmani's apparatus has been put in operation.

Very respectfully your obedient servant

Joseph Henry

Secretary.

Rec'd May 10 14
Ans'd May 29 5

Smithsonian Institution,
Washington, May 3. 1862.

Dear Sir:

We are pleased to learn from your letter of the 29th ult. that farther explorations are to be made in the Colorado district, and that you have furnished the means of hypsometrical measurements, and expect a return in botanical specimens.

We will cheerfully send you a supply of meteorological directions to be distributed at your discretion. We shall also send you a set of our late entomological publications, and shall be happy, at all times to have an opportunity, through you, of assisting to advance a knowledge of the physical geography and natural history of this continent.

We fully approve the recommendation of Dr. Gray as to the disposition of the plants in your possession, viz: that a full set be sent to the Institution, another retained by yourself, and the remaining duplicates to be distributed through you in the name of the Smithsonian Institution,

0 1 2 3 4 5 6 7 8 9 10

MISSOURI BOTANICAL GARDEN

to Cambridge, Kew, Paris, Berlin, Vienna, St. Petersburg &c.

You will oblige us by requesting that the receipts for these be sent to the Smithsonian Institution, since the Government has present-ed all its collections to this establishment, and written acknowledgments are our vouchers for the faithful discharge of the duty which has been entrusted to the Board of Regents.

I have received the part of the Transactions of the St. Louis Academy, containing the interesting article of Dr. Wizlizenus, on Electricity and your paper on temperature and rain, but I have not as yet had time to give them a critical examination.

We shall publish in our next report, at least, an abstract of your paper. I am pleased to inform you that your relative Mr. Hilgard has returned to Science, & to this city. He had been too long hard by the tree of knowledge to be able to relinquish permanently the taste of its fruit.

On consultation with Professor Baird

MISSOURI BOTANICAL GARDEN
ST. LOUIS

he has suggested that it will be well for you to send the complete set of plants for the Institution to Dr. Torrey as soon as possible in order that he may intercalate it with the general collection he is now arranging for us.

I remain,

Very Respectfully
Your obed.t servt.

Dear Sir:

Your letter making enquiry respecting the possibility of using the facilities of the Smithsonian Institution in receiving parcels from California has been duly received. In reply I hasten to say that we do not feel at liberty to authorize the transmission of any considerable bulk in our name as we would thereby violate an implied agreement with the company forming the route. Any parcel of books, however, or packages of plants not exceeding one or two cubic feet at a time might be sent without impropriety.
